The Learning Trajectory

Question
What is Learning?

A neuroscientist:

“When an axon of cell A is near enough to excite a cell B and repeatedly or persistently takes part in firing it, some growth process or metabolic change takes place in one or both cells such that A's efficiency, as one of the cells firing B, is increased.”

(Hebb 1961)

A cognitive psychologist:

“the process by which a relatively stable modification in stimulus-response relation is developed as a consequence of functional environmental interaction via the senses.”

(Sheldon 1996)

An educator:

“A process whereby knowledge is created through the transformation of experience.”

(Kolb 1984)

A Student:

“What I do for Homework.”
